Retained Self-Monitoring Requirements - 2011

Dear Mr. Danneffel,

Georgia-Pacific LLC (Georgia-Pacific) has prepared this letter to comply with the year-end reporting requirements described in Part II, Section C.3 of the Substantive Requirements Document (SRD) MIU990030.

According to the SRD, the discharger (Georgia-Pacific) is required to maintain a year-to-date log of retained self-monitoring reports. The discharger must certify to the Michigan Department of Environmental Quality (MDEQ) that these year-to-date logs have been retained and that the application on which the SRD was based still accurately describes the discharge.

Water was treated and discharged as needed at Outfall 001 (as described in the SRD) between August 8 and November 10, 2011. The volume of water treated and discharged was recorded daily and summarized on a monthly basis. The required influent, mid-point, and effluent sampling and analyses were also conducted as required by the SRD and retained with the treatment and discharge data in the year-to-date log. Analytical data and discharge data were used to calculate monthly loading data. These year-to-date logs are available for review by requesting the information from the Facility Contact provided in the SRD.

The application on which the SRD is based still accurately describes the discharge. Discharge is expected to occur from Outfall 003 in 2012. No significant changes to the discharge characteristics are anticipated. Outfall 003 is located in the same approximate location as described in the SRD (i.e., discharging to Davis Creek). If significant changes to the outfall locations are planned, MDEQ will be notified prior to making such changes.

Should you have any questions or comments, please do not hesitate to contact me at 734.735.0780.

Sincerely,

A handwritten signature in black ink, appearing to read "Garry Griffith". The signature is fluid and cursive, with the first name "Garry" being more prominent than the last name "Griffith".

Garry Griffith, P.E.
